TOP TRAIT LEADERS

THESE TOP 10 LISTS FEATURE ELITE STGENETICS® BEEF SIRES FOR SEVERAL GENETIC TRAITS!

geneticTM SIRES

♀catalyst

Providing superior genetics, whether purchased or raised, is a responsibility we take seriously at STgenetics®. The bulls who carry the Genetic CatalyST™ brand will represent a studied, thoughtful approach that considers many aspects of seedstock and commercial beef cattle production. Among the many elite animals we create each year, a couple might be unique enough to place in the commercial environment for your consideration.

\$ST is a terminal feeder profit index expressed in dollars per head used to rank beef sires. \$ST utilizes genomic breeding values for growth, Feed Conversion Efficiency, and carcass traits from STgenetics® comprehensive Beef on Dairy progeny testing program to represent the expected dollar-per-head difference in profit potential of Beef on Dairy calves from 400 lbs. to finish.

\$ST = CARCASS REVENUE - PRODUCTION COSTS

Carcass Weight X Grid Value

Feed Cost + Yardage + Production Costs

WHAT SETS \$ST APART?

To improve the accuracy of genomic predictions and establish an internal breeding program to identify elite beef genetics, STgenetics® created an extensive progeny testing program. Through the collection of accurate phenotypes linked with each animal's DNA profile, this program enables STgenetics® to provide reliable genomic estimates for key economic traits such as growth, Feed Conversion Efficiency, and carcass value. \$ST simplifies selection by combining the traits that are most impactful for terminal profitability to precisely rank sires based on their ability to create profitable Beef on Dairy calves. By utilizing \$ST, producers can more accurately identify within the most elite beef genetics, which sires will excel in Beef on Dairy strategies.

Bull B's \$ST of \$285 indicates that on average, progeny of Bull B would have a \$132 (\$285-\$153) per head profit advantage across the feeding period compared to progeny of Bull A.

\$ST PERCENTILE VALUE: 1% - \$250 | 5% - \$179 | 10% - \$147 | AVERAGE = \$34

A premier index designed to increase profitability and sustainability by reducing feed costs and decreasing the carbon footprint of cattle.

The greatest potential for improving profitability and environmental sustainability is to select animals that produce the same amount of milk or meat on less feed.

Ecofeed® enables producers to positively impact an animal's carbon footprint prior to birth and reduce the input cost of beef production.

THE HIGHER THE SCORE
THE MORE EFFICIENT THE ANIMAL
...80 90 100 120 130...

High Ecofeed calves consume
10% less feed per day

STrategy

CONTACT YOUR STGENETICS® REPRESENTATIVE TO DESIGN GENDER RATIOS FOR YOUR HERD-SPECIFIC GOALS

USE BULLS THAT EXCEL FOR MATERNAL TRAITS IN **SEXED FEMALE**

STrategy is a whole herd breeding approach using gender control. Using sex-sorted semen you can create the progeny your herd needs, while generating the productivity and profitability you want.

USE BULLS THAT EXCEL FOR TERMINAL TRAITS IN **SEXED MALE**

GENDER CONTROL USING Sexed Female

Use Ultraplus™ Female semen to make F1 replacements using your choice of two maternal breeds. These crossbred females excel for mothering and fleshing ability, milk, fertility, and longevity.

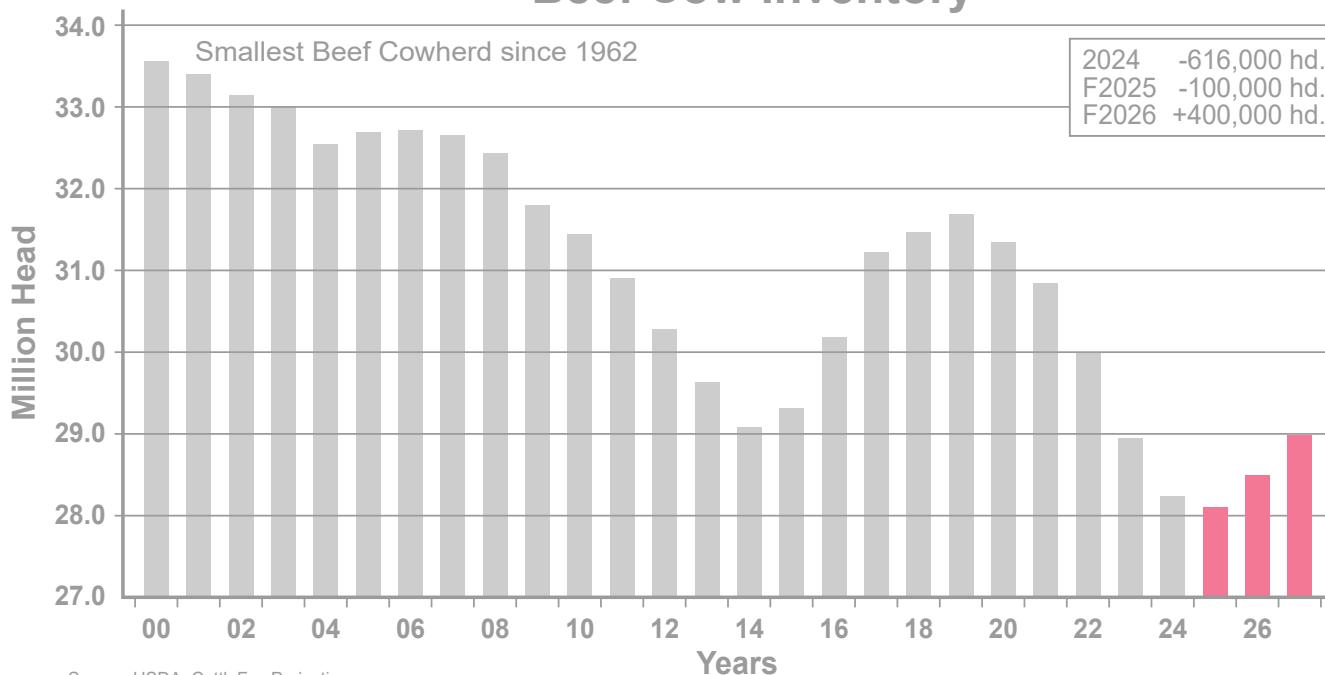

GENDER CONTROL USING Sexed Male

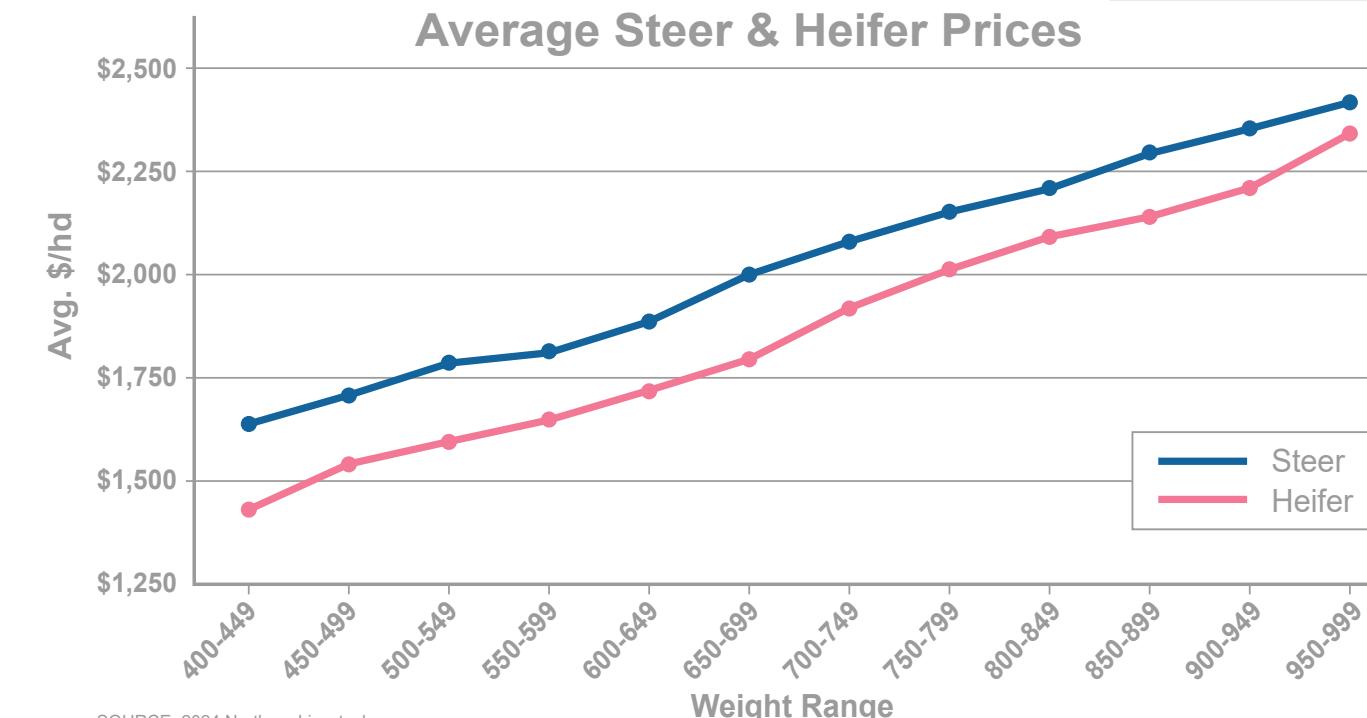

Use Ultraplus™ Male semen to make market steers using your choice of one terminal sire. These steers excel for rapid growth, feed conversion, carcass quality, and profitability.

Beef Cow Inventory

CREATE REPLACEMENTS & BUILD BACK YOUR HERD FASTER!

STEERS = HEAVIER & MORE VALUABLE AT WEANING!

SEXED SEMEN

Protocols

HEAT DETECTION

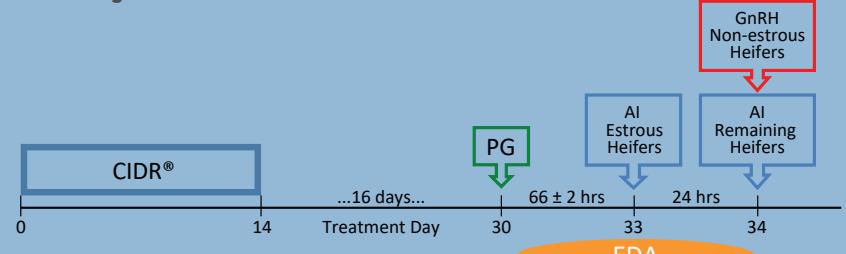

Sexed semen can be used on any female observed in estrus (heat) and following synchronization with any protocol. For best results with sexed semen, perform AI 12 to 22 hours after detecting females in estrus. Use of estrus detection aids (EDA) is highly recommended.

SPLIT-TIME AI (STAII)

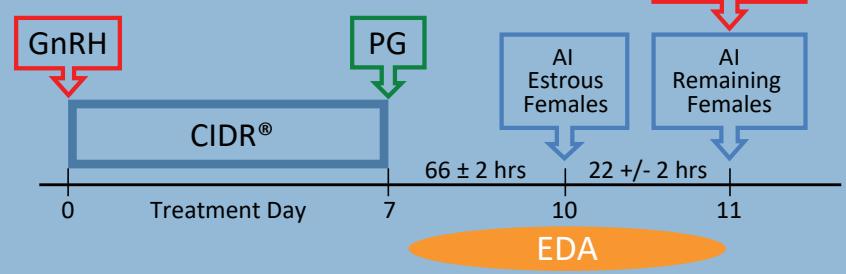

Perform first TAI 66 ± 2 hrs after PG in estrous females. GnRH administered at second TAI only in non-estrous females. Females detected in estrus by first or second AI receive sexed semen. Females not in estrus receive conventional semen at second TAI.

Heifers only

14-day CIDR®-PG & STAII

Cows and/or Heifers – 7-day CO-Synch + CIDR® & STAII

These protocol sheets were assembled by the **Beef Reproduction Task Force: BeefRepro.org**. Programs are intended to promote sustainable food production systems by the beef industry through sound reproductive management practices for replacement heifers and postpartum cows. The Beef Reproduction Task Force recommends working with a licensed veterinarian for proper use and application of all reproductive hormones. **Approved 9-5-2023**

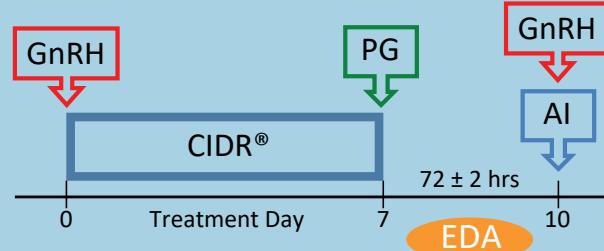

FIXED-TIME AI (FTAI)*

To optimize pregnancy success, it is recommended to use sexed semen on females that have exhibited estrus before FTAI and conventional semen on females that have not exhibited estrus.

Heifers only

7-day CO-Synch + CIDR®

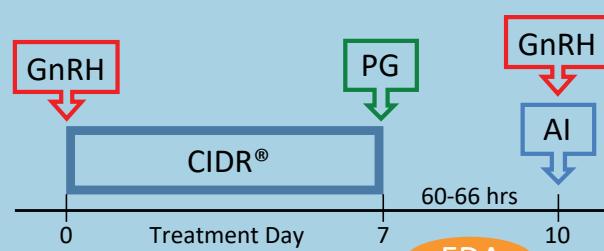

Perform TAI at 72 hrs after PG with GnRH at TAI.

Cows only

7-day CO-Synch + CIDR®

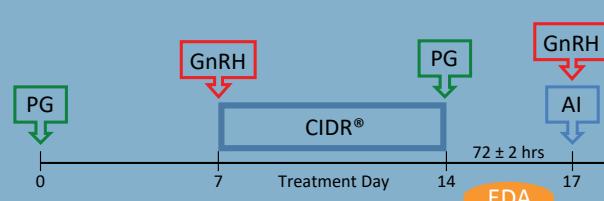

Perform TAI at 60 to 66 hrs after PG with GnRH at TAI.

Heifers only

PG-7 7-day CO-Synch + CIDR®

Perform TAI 72 ± 2 hrs after second PG with GnRH at TAI. Heifers in estrus receive sexed semen; heifers not in estrus by TAI receive conventional semen.

*The time listed for "Fixed-time AI" should be considered as the approximate average time of insemination. This should be based on the number of females to inseminate, labor, and facilities.

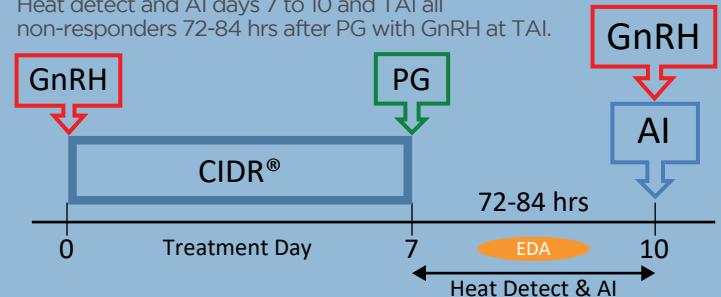

BEEF HEIFER Protocols

HEAT DETECT & TIME AI (TAI)

For best results perform AI 12 ± 2 hrs after detection of estrus.
Use of estrus detection aids (EDA) is highly recommended.

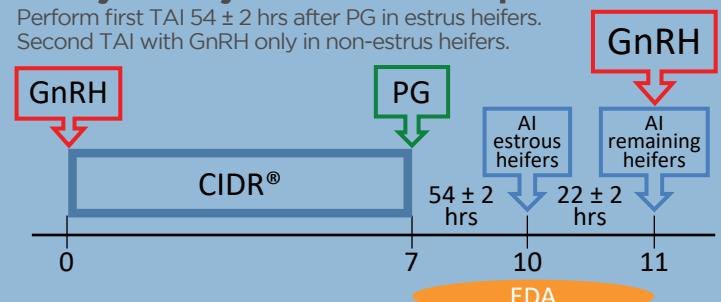

Select Synch + CIDR® & TAI

Heat detect and AI days 7 to 10 and TAI all non-responders 72-84 hrs after PG with GnRH at TAI.

7-day CO-Synch+CIDR® & Split-TAI

Perform first TAI 54 ± 2 hrs after PG in estrus heifers. Second TAI with GnRH only in non-estrus heifers.

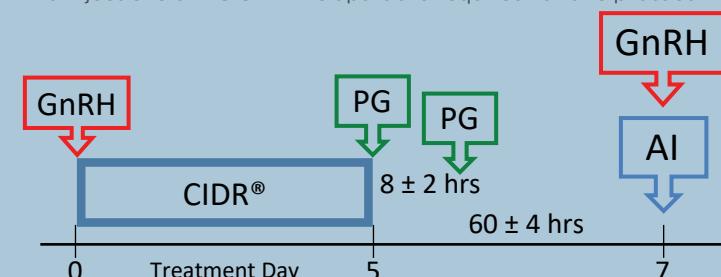

FIXED-TIME AI (FTAI)

The time listed for Fixed-time AI should be considered as the approximate average time of insemination based on the number of heifers to inseminate, labor, and facilities.

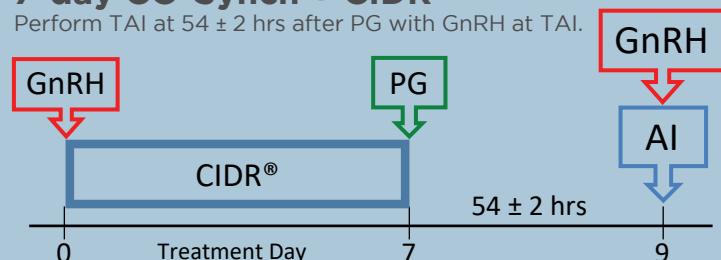

5-day CO-Synch + CIDR®

Perform TAI at 60 ± 4 hrs after CIDR removal with GnRH at TAI. Two injections of PG 8 ± 2 hrs apart are required for this protocol.

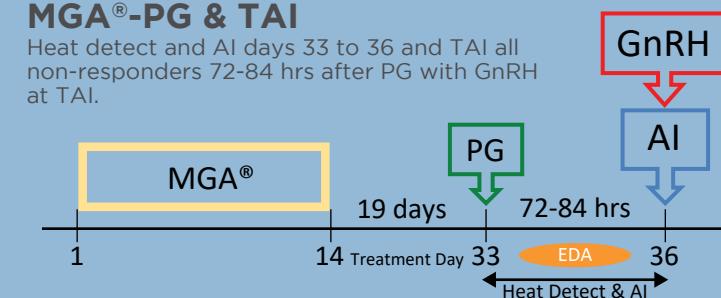

7-day CO-Synch + CIDR®

Perform TAI at 54 ± 2 hrs after PG with GnRH at TAI.

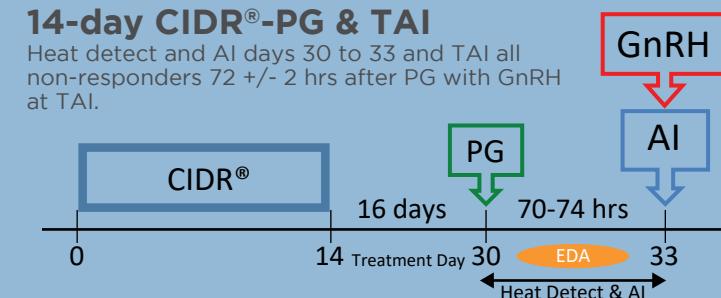

MGA®-PG & TAI

Heat detect and AI days 33 to 36 and TAI all non-responders 72-84 hrs after PG with GnRH at TAI.

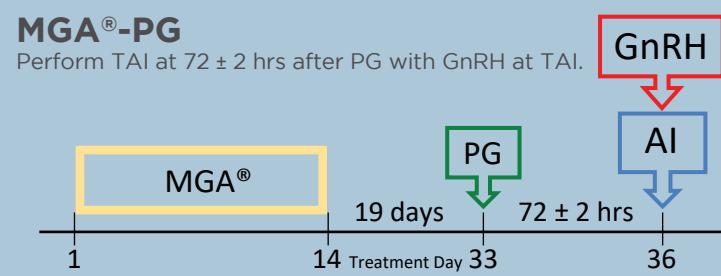

14-day CIDR®-PG & TAI

Heat detect and AI days 30 to 33 and TAI all non-responders 70 ± 2 hrs after PG with GnRH at TAI.

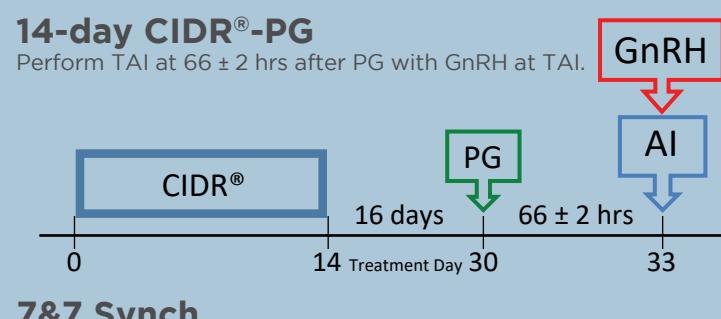

MGA®-PG

Perform TAI at 72 ± 2 hrs after PG with GnRH at TAI.

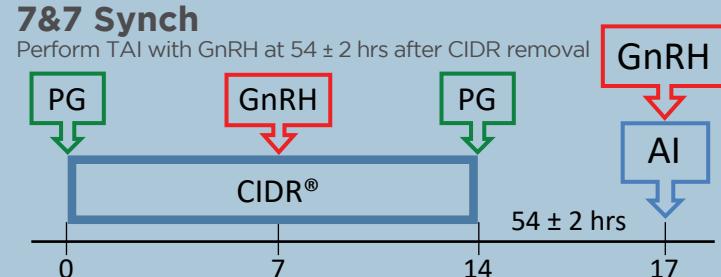

14-day CIDR®-PG

Perform TAI at 66 ± 2 hrs after PG with GnRH at TAI.

7&7 Synch

Perform TAI with GnRH at 54 ± 2 hrs after CIDR removal

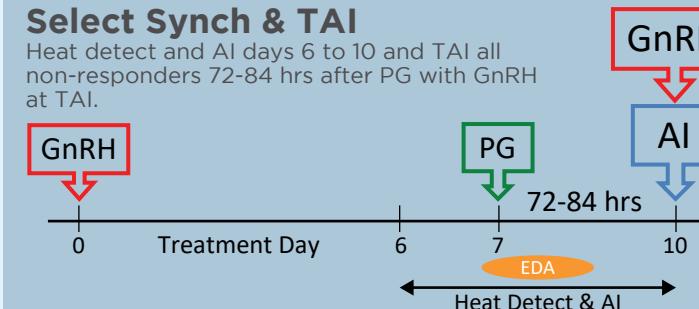

BEEF COW Protocols

HEAT DETECT & TIME AI (TAI)

For best results perform AI 12 ± 2 hrs after detection of estrus.
Use of estrus detection aids (EDA) is highly recommended.

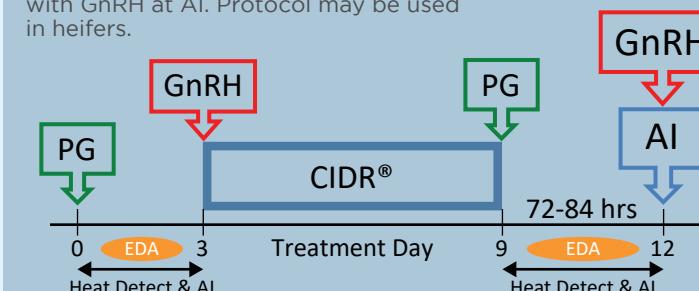

Select Synch & TAI

Heat detect and AI days 6 to 10 and TAI all non-responders 72-84 hrs after PG with GnRH at TAI.

PG 6-day CIDR® & TAI

Heat detect & AI days 0 to 3. Administer CIDR to non-responders & heat detect and AI days 9 to 12. TAI non-responders 72-84 hrs after CIDR removal with GnRH at AI. Protocol may be used in heifers.

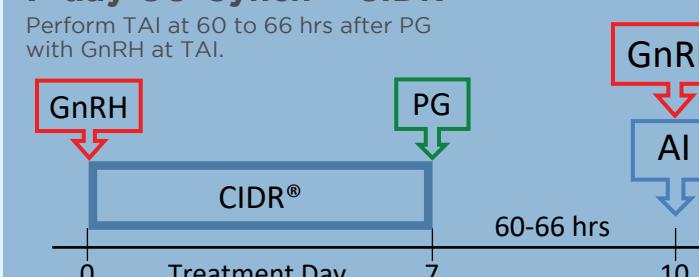

FIXED-TIME AI (FTAI)

The time listed for Fixed-time AI should be considered as the approximate average time of insemination based on the number of heifers to inseminate, labor, and facilities.

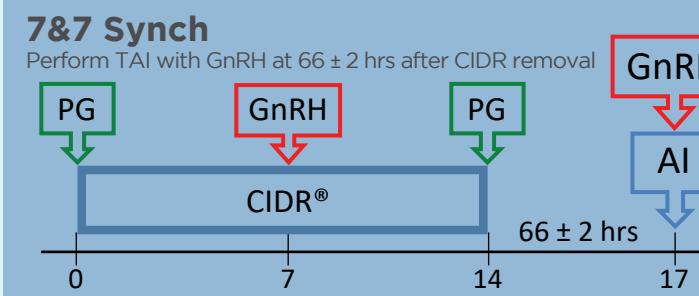

7-day CO-Synch + CIDR®

Perform TAI at 60 to 66 hrs after PG with GnRH at TAI.

7&7 Synch

Perform TAI with GnRH at 66 ± 2 hrs after CIDR removal
